How does DCI use client photos and photos taken for electronic visit verification (EVV)?

- Photos are stored in a secure business cloud and are only used by our facial recognition technology to verify that the client was present for the employee's visit

- Photos are one method to verify the client is present when the services are rendered. Unlike signatures, PINs, and passwords, photos do not require client participation. Clients can stay comfortable while employees effortlessly clock in and out using the electronic visit verification method, picture/facial recognition.

- Client photos taken by the employee for electronic visit verification (EVV) are never stored on the employee's cell phone when using the DCI Mobile App
