

When adding EVV locations received alert, "Google could not locate this address". How do I add it?

- When adding EVV locations to a client, the address is verified via Google Maps.
- When the alert, "Google could not locate this address, did you mean _____" populates:
 - If the address suggested by Google is correct, select the **Confirm** button.
 - The address will be updated in the form wizard and added as an EVV location
 - If the address suggested by Google is incorrect or no address is given, select the **Cancel** button.
 - Please verify the address with the client
 - If the address is correct, request to add the location to Google Maps:
 - Go to the Google Maps website <https://www.google.com/maps/>.
 - Search for the address
 - Click the blue **Add a missing place** hyperlink
 - Complete the Add a place form
 - Click **Submit**
 - If Google Maps denies the request to add the location (place), the closest address to the EVV location will need to be used when adding the EVV location.
